

PRODUCT SPECIFICATION

Spare parts

The wide range of port and material handling equipment designed and manufactured by TTS requires the ready availability of original spare parts. A stock of these parts is always available to meet the specific requirements of the customer and can be ordered direct through any local office or TTS sales agent.

TTS PORT AND MATERIAL HANDLING DIVISION

Quality original spare parts

The availability of original manufacturers' spare parts at short notice is essential to the smooth operation of any item of cargo access equipment. The TTS group's global sourcing power is key to worldwide availability of genuine quality parts. These can be delivered to any location in the world within 48 hours, subject to availability of spares.

In addition to the adhoc supply of parts, TTS offers spare parts agreements which can include keeping a stock of parts, which otherwise would have extra-long delivery times, ensuring the shortest possible lead time so that customers' business is not disrupted.

The quality of original spare parts can be the difference between success and failure. Original parts can be more expensive, but their performance and quality is guaranteed. When labour costs for parts replacement are taken into account, the price difference between original and pirated spare parts becomes insignificant.

Spare parts identification systems

Article number, drawing number, and other necessary information is required to enable identification of correct spare parts.
